Experience

AI & Software Engineer — PMG Jan 2026 – Present

Creator Engine

- Help architect an agentic influencer campaign management platform from the ground up, built on the open-source Pi agent framework.
- Build agent-driven frontend interfaces spanning the full campaign lifecycle using TypeScript, Node.js, and Terraform.

Alli Workflows

- Migrated 20+ UI components across 3 core screens from a legacy design system to a new design system in a Go, TypeScript, and Terraform microservice.
- Troubleshot automation workflows for PMG's internal media teams and contributed to user testing and product feedback.

Leadership

- Completed PMG's AI & Software Engineering graduate leadership program; now mentor 4 engineers in the current cohort and speak on its panels and workshops.

AI & Software Engineering Intern — PMG — Project Pulse (Operations Dashboard) Jun 2025 – Jul 2025

- Delivered enterprise-scale observability solution by defining and validating 18+ Service Level Objectives across 11 engineering platforms, increasing system visibility by 30% across all Alli services.
- Built mission-critical dashboards serving 100+ engineers and executives weekly with 2 real-time Looker dashboards integrating 40+ auto-refreshing KPIs from 5 major platforms (Datadog, AWS, GitHub, Jira, Workday).
- Identified $24K–$60K in annual AWS cost savings potential by developing algorithms to surface unused services and idle ECS containers (30+ day inactivity threshold).

Projects

Forecast Tx — Predictive Modeling for Severe Weather Events (State Farm Project)

- Built a cloud-based web app predicting the frequency and severity of severe weather (hail, wind, rain) across Texas over 5–10 years from historical NOAA data, using Linear Regression and LSTM models with 80% forecasting accuracy.
- Deployed on Google Cloud Platform with Firebase authentication and PostgreSQL storage, improving data retrieval time by 30%.

FIXR (HackUTA 2023 Winner, Best Use of Google Cloud)

- Developed a check engine light diagnostic tool using Bluetooth and SAE J1850 PWM protocols to connect OBD2 ports with a mobile app.
- Built a cross-platform interface with React Native, Swift, SwiftUI, and TypeScript.

Education

University of Texas at Arlington Arlington, TX
B.S. in Computer Science, *Cum Laude* Dec 2025

Tarrant County Community College Fort Worth, TX
Associate of Arts (Dec 2023) · Associate of Science (May 2022)

Skills

Languages:	TypeScript, JavaScript, Python, Go, Java, C++, C, Swift, PHP, HTML/CSS
Frameworks & Libraries:	React, Node.js, React Native, Tailwind CSS, NumPy, Pandas
AI:	Agentic AI, Generative AI, Pi agent framework
Databases:	PostgreSQL, MySQL, SQLite3, MongoDB, Firebase Firestore
Cloud & DevOps:	AWS, Google Cloud Platform (GCP), Firebase, Docker, Terraform
Tools:	Git, Looker, Datadog, Jira, Confluence
Spoken Languages:	English, Spanish
